

Pipe Cleaning High Pressure Water Jetting

Pipeline Services offer a choice of pipe cleaning systems suitable for all types of pipes, drains and conduits. Some of the factors in determining the most suitable equipment for the job include...

- Pipe material.
- Pipe diameter.
- Pipe shape.
- Accessibility of work location for equipment.
- Reasons for Jetting such as silt, scale, roots protective coatings.

Our experienced operators undertake a range of pipe cleaning services including...

- **Flushing** Cleaning of the wall prior to CCTV inspection without removal of roots or silt.
- **Root Cutting** Involves flushing plus the removal of roots to provide at least 95% of the original cross-section.
- **Heavy Cleaning** Involves Flushing and Root Cutting along with the removal of all debris from the pipe to above ground.
- **De-scaling** Involves the removal of build-up on the walls that has adhered to the surface (such as rust, encrustation, grease and marine growth).
- **Vacuuming** Removal of debris directly into a tanker without the need for man-access to manholes
